A COMPLETE SOLUTION THAT INCLUDES MOBILE APPS, A SERVER, A DESKTOP CLIENT, AND AN SDK

BUILD YOUR VOIP AND IM APPLICATION

By leveraging the **source code** of the Linphone apps

Available on all platforms

By integrating our **library, Liblinphone**; this is the easiest way to add advanced VoIP and instant messaging (IM) features into software applications or hardware products.

- APIs in Swift/Kotlin/C#/C++
- Easy integration into mobile apps with Maven and Cocoapod
- Tutorials and code examples on Gitlab

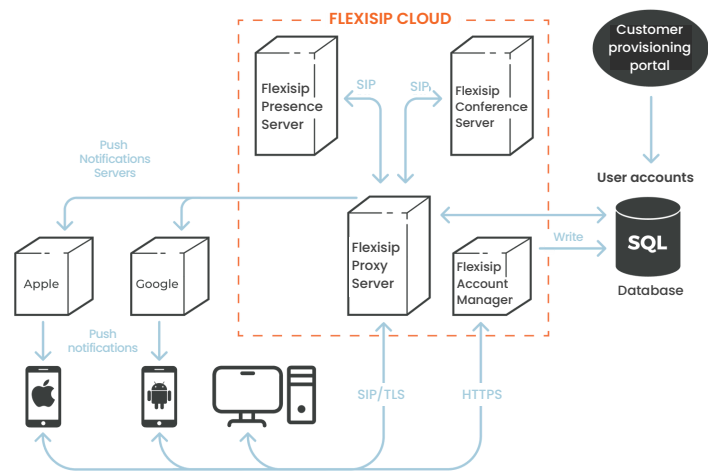

<https://gitlab.linphone.org/explore/projects>

DEPLOY YOUR SIP NETWORK

Flexisp is a **complete, modular and scalable SIP server suite** written in C++11; it comprises secure proxy, push notifications, account manager, group chat, and conferencing functions.

Flexisp services can be run on different machines or combined on one machine as a single instance or in cluster mode.

CUSTOMISE LINPHONE FOR YOUR OWN BRAND

- OR**
- Internally, using your own development team
 - By outsourcing the **graphics customisation to us**

SERVER SIDE

Flexisp is interoperable with most SIP-based PBXs and SBCs and offers all the features needed to deploy your own secure communication service; it has been adapted for mobile applications and is ready to use. We can help you deploy this solution in your infrastructure.
